I think it's ridiculous that the NAB wants to shut down the XM instant traffic and weather stations. I pay for satellite programming simply because I want to hear what I want to hear, not what some guy in an office wants to put on his station. I especially like the fact that XM provides access to the Instant Traffic & Weather. Why? Because I can't even get that information on FM radio for FREE!!!!

It's a shame that the NAB is too lazy to step up to the plate and put decent programming on their stations, but until they do they need to stay out of the XM market - I pay to hear the stations I want to hear and I should be entitled to instant traffic and weather, it's more than what those other stations can do!
